Climate hazards modelisation in West Africa Project

“Climate hazards modelisation in West Africa” is a multidisciplinary project that involves mathematicians, economists and financial analysts, from three research centers of the University Clermont Auvergne: the Centre d’Etudes et de Recherches en Développement International (CERDI), the [Laboratoire de Mathématiques Blaise Pascal](#) (LMPB) and the [Clermont Recherche Management](#) (CleRMA).

The overall goal of the project is to make a **mathematical modeling** in order to better understand **climate risk** and improve the performance of **index insurance products**.

Candidates should have completed a PhD in Econometrics or Statistics with a strong background in probabilistic models and statistic methods with the use of databases under (R) and/or Matlab.

Post-doc position starting: 1st June 2019
