

# Providing information on mining taxation scheme in Africa

Published on October 17, 2018 – Updated on October 17, 2018

Dates

on the October 17, 2018

The CERDI is launching with the [FERDI](#) and [ICTD](#), the **first legal and tax database** that lists the tax regime applicable to **industrial gold mines in 21 African producing countries** since the 1980s and a simulation tool for sharing the mineral resource rent between State and investors.

The tools provided make it possible to:

1. understand the characteristics of mining taxation;
2. know the evolution of mining taxation;
3. compare the mining taxation between African countries;
4. compare mining taxation between projects of the same country;
5. assess the sharing of the mineral resource rent between State and investors.
